

President visits children at the Hematology Center

Uzbekistan celebrates Ramadan Hayit in peace and tranquility.

The kindness and spiritual generosity, the desire to help families in need, to visit and support the sick, are inherent in our people.

On May 14, President Shavkat Mirziyoyev visited the Republican Specialized Scientific Practical Medical Center of Hematology.

The center specializes in the provision of hematological and transfusion care, the prevention and treatment of oncohematological diseases, and research in this area.

Methods of high-dose and intensive polychemotherapy have been introduced into the practice of the center. With the introduction of new developments in the treatment of acute lymphoblastic leukemia, remission and complete recovery of patients reaches 70-85 percent.
